Education

University of Washington, Seattle

December 2017 (Expected)

BS, Computer Science | GPA: 3.85

Coursework: Data Structures & Parallelism, Systems & Networks programming, Artificial Intelligence, Elements of programming languages, Hardware/Software interface & Software design and implementation.

Proficiencies & Technologies:

Java | JavaScript | NodeJS | Django | Ruby | Python | C | C++ | C# | AngularJS | MongoDB | HTML & CSS | mocha | Postgres | Git | Linux | AWS Lambda | AWS API Gateway | AWS Elastic Search | AWS Kineses | AWS S3 | Serverless | Consul

Experience

FTI Technologies | Software Engineer Intern

June 2016 – Present

- Developed a lambda function for the company to query a report from elastic search and efficiently present the results to the users without any need for a backend to compute or process the query
- Implemented scripts to decrease the time by 90% to efficiently deploy a complete architecture of e-discovery on AWS.

CleverTap | Software Engineer Intern

June 2015 – September 2015

- Developed the migration code for Maxmind's GeoplP1 to GeoplP2 to make location tracking efficient. Currently being used by over 100 clients of CleverTap.
- Developed plugins for various IDEs to display errors while integrating CleverTap's SDK. The plugin can autocorrect, autofix and auto-insert code. Reduced CleverTap's customer service by over 50%.

TA in Computer Lab | University of Washington

October 2015 – Present

- Involved in improving helping students understand the basic computer system.
- Guided students & teachers by extending a helping hand to their day-to-day computer issues.

Jalpa Tours & Travels | Web Developer

May 2014 – January 2015

- Developed and implemented a Web App for the startup using Django. (open source on GitHub)
- Uses client side admin control to auto populate every element of the website.

Projects & Activities

Launch: (launch.startupuw.com)

Web-App of all the startup resources and side projects in and around campus. Allows users to add projects, build a network and up vote them.

Startup UW: (startupuw.com)

Technology and Finance head of UW's largest entrepreneurship club providing assistance for startups. Organized a Startup Weekend for UW.

BilliCam Research (Ubicomp Lab)

Researching in optimizing ML scripts that analyzes a newborn baby for jaundice. Uses regression to determine the result from baby's pictures. Implemented the login system.

Inebriate – Alcohol level detecting through Android app

Research involved in using Machine Learning techniques to determine alcohol levels using an Android app. Implemented various classifiers to collect data using the phone. Implemented various different ML algorithms with an aim to minimize the number of tests needed to maximize the accuracy of alcohol level detection.

PathFinder: GoogleMaps API

Implemented an algorithm to efficiently find the shortest path between various locations on google maps. Takes into account traffic, time to travel, signals and previous congestion records.
